MULTI-FUNCTION POWER METERS - S604 SERIES

Three phase multifunction power meters with CTs, direct measurement, Rogowski Coils

The S604 series includes innovative three-phase network analyzers for the measurement and storage of electrical parameters. All versions for TA standard 1/5 A, for direct link up to 80 A or for Rogowski coils input, enclose the ideal functions for energy management applications. Depending on the model, the device can communicate through the RS485 serial port with ModBUS RTU / ASCII or through the Ethernet port with ModBUS protocol TCP-IP. Onboard Ethernet models is very useful the Web server interface to remotely manage surveys and export logged data for energy audits. The top features of the advanced versions ENERGY Plus are 8 MB for data logs, the recording of harmonics up to 15th and the recording of MIN./AVG/MAX values of all the active and reactive powers.

INSERTION MODE

- Three phase 4 wires
- From 3x400 V to 3x415 V threephase 3 wires
- From 230 V to 240 V single phase

POWER SUPPLY

- Self-Powered models
- Auxiliary supply models

DIGITAL I/O'S

- #1/2 alarm/pulse output
- #1 average values calculation (DMD)

DATA STORAGE

- Active/Reactive Power average values recording (S604B – Basic versions) or All Power MIN/AVG/MAX values di tutte le potenze (S604E Energy Plus versions)
- Up to 8 MB memory for data recording

TYPICAL APPLICATION

- Monitoring system and energy control
- Individual machine load monitoring.
- Power peak control
- Switchboards, gensets, motor control centers etc.
- Remote metering and cost allocation

SETTINGS

- ENERGY POWER PACK (software)
- Web Server
- Front Key buttons

OPTIONAL COMMUNICATION

- Modbus RTU/ASCII (RS485 port)
- Modbus TCP-IP (LAN port)

ENERGY COUNTERS AND MEASUREMENTS

- Total counters
- Inductive / capacitive independent counters
- Bidirectional measurement on 4 quadrants for all powers and energies
- Energy efficiency parameters measurement

THD & HARMONICS

- Current / Voltage THD Values
- Current / Voltage THD Values up to 15th harmonics

CURRENT INPUT

- Version for 1 or 5A CT, for direct connection up to 6A or 80A
- 3 current measurement scales for Rogowski model

ROGOWSKI COILS - Working principle

An air-cored toroidal winding is placed around the conductor, the magnetic field produced by the current induces in the coil a voltage proportional to the rate of change of current. Integrating this voltage the output become proportional to the current (as for a current transformer).

Flexible coil

From 25 to 300 cm (length)

Very thin cross section down to approx. 8 mm

TECHNOLOGY

- The junction point is insensitive to both the position of the internal conductor and to currents carried by external conductors
- Coil and cable shielded against electromagnetic noise

ENGINEERING

- Cross section reduced up to approx. 8mm
- High flexibility
- Easy installation
- Low weight

CALIBRATION

- Better than 1% accuracy, even close to the junction point
- Accessible calibration point for easy recalibration, if required

OPTIMAL LOCK

- Secure lock even in presence of vibration and/or pull-ups
- Stable lock ensuring repeatability in measurement

MULTI-FUNCTION POWER METERS - S604 SERIES

PROGRAMMING SYSTEM

ETHERNET / MODBUS COMMUNICATION / PROGRAMMING

FRONT KEY BUTTONS

Readings, settings and recording are available through tramite front key buttons with 7 display page groups management.

Configuration tool for Energy power meters SERVER S604B and S604E. ENERGY POWER PACK assures reading and visualization of all measurements, it also provides a overall setup of parameters, downloading and converting recording and it manages remote connections

By Web Server it's possible visualizing all device values and associate a recording exportable into a csv file

| ACCESSORIES | |
|-------------|--|
| S107USB | RS485/USB serial converter, portable version |

The new SENECA energy counters for DIN rail mounting cover the most different application requirements for single-phase and threephase systems. Available with RS485 Modbus, M-BUS or Ethernet + webserver communication interfaces, the energy counters are compliant with MID (2004/22 / EC Directive) in class B with EN 50470 standard. Equipped with Wide backlit LCD display for easy consultation of the values of energy and power, the counters also make available the diagnostic function signaling polarity errors in the connection.

HIGHLIGHTS

- On-board communication RS485 Modbus RTU/ASCII
- On-board communication M-Bus
- On-board communication Ethernet (Modbus TCP)
- For 3 or 4 wire networks with balanced or unbalanced load
- Class B according to EN 50470-3, MID certified
- SO output for energy pulse emission and tariff input
- Wide LCD display with 8 main digits

- M-Bus (Meter-Bus) is a European standard (EN 13757-2 physical and link layer, EN 13757-3 application layer) for the remote reading of gas or electricity meters.
- The M-Bus was developed to fill the need for a system for the networking and remote reading of utility meters,
- The data (e.g. heat consumption) are read out electronically
- At one single cable, which connects to a building controller all consumption meters of a housing unit can be attached
- All meters are individually addressable
- Apart from the availability of the data at the controller also a remote reading is possible

The Measuring Instruments Directive (2004/22/EC) is a directive by the European Union, which seeks to harmonise many aspects of legal metrology across all member states of the EU. Its most prominent tenet is that all kinds of meters which receive a MID approval may be used in all countries across the EU.

APPLICATION FIELDS

Totalization of the electric energy in the industry for each single line or machine

Measurement of energy generated by renewable sources

Accounting and billing of consumptions in camp sites, malls, residential areas, naval ports etc.

Accounting of the consumptions in buildings with executive office services

Energy monitoring systems

Remote survey of the consumptions and compute of the costs

S500 SERIES - PROGRAMMING

FRONT KEY BUTTONS

Front key buttons on all models can be programmed these functions:

- Page scroll
- Temporary visualization of secondary values
- Access / exit Programming pages
- Start / stop / reset partial hour counter
- Setting parameters
- Display test

WEB SERVER

All counters S500 Series energy counters - Ethernet or external COM version - have access to a **WEB SERVER** accessible through protected connection. WEB SERVER provides real-time values and recorded data in .csv exportable files.

ENERGY MODBUS PACK

Modbus models can be configured through software package **ENERGY MODBUS PACK** downloadable by www.seneca.it.

- Serial port setting
- Search / addition counters
- Network parameters configuration for each counter

Free download by www.seneca.it

ENERGY M-BUS PACK

Communication models with M-BUS interface can be configured by the software package **ENERGY M-BUS PACK** downloadable by www.seneca.it.

- Serial port setting
- Search / addition counters network
- Parameters configuration network for each meter

Free download by www.seneca.it
