

# ADVANCED DATALOGGERS

WITH REMOTE  
MEASUREMENT AND  
TELEMETRY FUNCTIONS

## OVERVIEW

Advanced dataloggers Z-GPRS3, Z-LOGGER3 and Z-UMTS allow to meet increasing data collection's needs as well as real time analysis and IT systems integration that are in line with the new productivity and communication concepts of Industry 4.0 and Internet of Things. These dataloggers, designed to fulfill remote alarm functions, telemetry and data logging, are available with built-in I/O's, supervision and programming software, Ethernet interfaces, RS485 Modbus Rtu serial ports and 2G/3G+ modem.

Optionally dataloggers can be combined with Cloud BOX, an IoT / Cloud solution proposed by SENECA that allows you to centralize data, manage remote connections, create multi-user custom supervision pages.

- FIELD MEASUREMENT, DATA COLLECTION, SENSORS /ACTUATORS INTERFACE
- INTEGRATION WITH AUTOMATION SYSTEMS (HMI / SCADA / PLC)
- REMOTE MONITORING, TELEMERY, ALARM MANAGEMENT
- FLEXIBLE PROGRAMMING AND CONFIGURATION

## PROGRAMMING

SENECA's advanced dataloggers ensures a flexible programming allowed by dedicated software designed by Seneca for the development of the control logics (SEAL). These modules are supplemented by an embedded Webserver, an App for SMS commands management, an import and data visualization Tool (Log Factory). Besides, the 'Cloud BOX' HMI allows real-time telemetry, RTU commands sending, log files analysis, events and alarms log archiving through customizable web pages by widget. SENECA offers powerful security integration with third-party Scada systems, Cloud, database and web platforms already available in plants.
