INSTALLATION MANUAL

R204 Series

PRELIMINARY WARNINGS

The word **WARNING** preceded by the symbol indicates conditions or actions that put the user's safety at risk. The word **ATTENTION** preceded by the symbol indicates conditions or actions that might damage the instrument or the connected equipment.

The warranty shall become null and void in the event of improper use or tampering with the module or devices supplied by the manufacturer as necessary for its correct operation, and if the instructions contained in this manual are not followed.

WARNING: The full content of this manual must be read before any operation. The module must only be used by qualified electricians. Specific documentation is available using the QR-CODE shown on page 1.

The module must be repaired and damaged parts replaced by the Manufacturer. The product is sensitive to electrostatic discharges. Take appropriate measures during any operation.

Electrical and electronic waste disposal (applicable in the European Union and other countries with recycling). The symbol on the product or its packaging shows the product must be surrendered to a collection centre authorized to recycle electrical and electronic waste.

COUNTERS Number of counters: 2 at 32 bit, maximum speed: 50 Hz	COUNTERS	Number of counters: 2 at 32 bit, maximum speed: 50 Hz				

This is a Class A product. In a residential environment this equipment may cause radio interference. In this case, the user may have to take adequate countermeasures.

ROGOWSKI SENSOR

The Rogowski sensor is a ring-shaped device designed for measuring AC, impulsive or complex waveforms. For its correct use:

- wrap the ring on the conductor so that the arrow symbol on the ring points in the same direction as the current in the conductor
- make sure the connections are made correctly
- for a more precise measurement, the conductor wire must be placed in a central position with respect to the ring
- for a correct measurement, calibrate the Rogowski sensor by writing the calibration coefficient in the corresponding Modbus register (see the user manual).

Example: if the sensor is supplied with a characteristic of 90 mV / 1000 A, on the calibration register corresponding to the phase in which the Rogowski sensor is applied, the value to be set is: $1000/(90 \cdot 10) = 1.11$

NOTE ON ACCURACY: The product has a nominal accuracy of 0.5%. The total accuracy is the sum between the accuracy of the device and the accuracy of the Rogowski sensor connected to it.

DIP - SWITCH SETTINGS

MARNING

The DIP-switch settings are read only at boot time. At each change, perform a restart.

For use and settings via DIP-SWITCH, see the user manual available on the website on the web page dedicated to the product.

4/8

ELECTRICAL CONNECTIONS

Field Installable Accessory

♠ CAUTION

The installation of this appliance must only be carried out by qualified personnel.

Check that the device plate data (measurement voltage, auxiliary power supply voltage, measurement current, frequency) match the actual data of the network to which the instrument is connected. In the wiring, strictly observe the insertion diagram; inaccuracy in the connections inevitably causes false measurements or damage to the instrument.

Once the instrument is connected, complete the installation with the device configuration.

The earth connection of the secondary of CTs with current, voltage or rogowski output is possible on the negative terminal. In the case of rogowski sensors, the screen must always be connected to the negative terminal.

Current measurement is only possible using current transformers.

It is advisable to insert a slow-blow 1 A fuse as indicated in the diagrams below.

CONNECTIONS FOR ROGOWSKI SENSORS

ATTENTION! The inputs for Rogowski sensors are non-inverting.

For electrical connections, refer to the Rogowski sensor manual.

CONNECTIONS FOR CURRENT OUTPUT TA

THREE-PHASE: 4 wires

THREE-PHASE: 3 wires

ORY IP ADDRESS

The default module IP address is static: 192. 168. 90. 101

In the R-204-2-L-P version, the module is supplied without an IP address (0.0.0.0).

WEB SERVER

To access the Web Server with the factory IP address above, use the following credentials:

Username: admin; Password: admin

<u>⚠</u> CAUTION

DO NOT USE DEVICES WITH THE SAME IP ADDRESS IN THE SAME ETHERNET NETWORK.

ETHERNET CONNECTION RULES

For the Ethernet cabling between the devices, the use of the shielded CAT5 or CAT5e cable is required.

DAISY-CHAIN ETHERNET CONNECTION

IT IS NOT ALLOWED TO CREATE LOOPS WITH ETHERNET CABLES

Using the daisy-chain connection it is not necessary to use switches to connect the devices. The following examples show the correct connections.

There must be no loops in the Ethernet cabling, otherwise the communication will not work. The modules and switches must be connected eliminating any loops. The following examples show the incorrect connections.

The LAN fault-bypass function allows you to keep the connection between the two Ethernet ports of the device ON, in the event of a power failure. If a device turns off, the chain is not interrupted and the devices downstream of the switched-off one will still be accessible. This function has a limited duration: the connection remains active for a few days, typically 4. The fault-bypass function requires that the sum of the lengths of the two cables connected to the switched off module is less than 100m.
